                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the parathyroid hormone type-1 receptor (PTHIR) from the zebrafish. Its coding seequence was obtained by sequencing a cDNA clone. The gene and protein can be used to detect diseases in man where the receptor is either overexpressed or underexpressed, and they can be used to treat these diseases, which may be developmental, physiological or neurological disorders. They can also be used to identify agonists and antagonists which can be used in a similar manner. In addition, the gene can be used for chromosome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ΟŻ
                                                                                    The rat bone parathyroid hormone/parathyroid hormone related protein (PTH/PTHrP) receptor protein sequence was deduced from close RISB obtd. by screening a rat osteosarcome (ROS) cell cDNA library to isolate those expressing functionally intact PTH/PTHFP receptor proteins, performed according to Gearing et al., (EMBO J. 8: 3676, 1989), by identifying colonies capable of binding a suitable readio. Labelled ligand. The protein may be used in a therapeutic compsn. to inhibit activation of PTH or PTHFP and thus reduce the level of calcium in the blood. Cpds. capable of competing with PTH or PTHFP for binding can be identified using the protein and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment. Classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a ligand such as in See also AAR27704-16.

The receptor a G-protein linked receptor having 7 transmembrane domains. It induces an increase in intracellular cAMP and calcum upon challenge with PTH or PTHrP. Recombinant receptor can be produced in vector/host cell systems and used in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, to screen for (ant)agonists and to raise antibodies. Host cells expressing the receptor are used for diagnostic measurement of PTH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding vertebrate parathyroid hormone receptor - useful for diagnosis and treatment of e.g. hypercalcaemia, hypo-calcaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

This sequence represents the human parathyroid hormone (PTH) receptor which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or
                                                                                                                                                                                                                        A human parathyroid hormone/parathyroid hormone-related protein (PTH/PTHrP) receptor (AAR92278) is encoded by CDNA clone HK-1 (AAT15948) isolated from a human kidney cDNA library. The receptor induces an increase in intracellular cAMP and intracellular free calcium when challenged by PTH or PTHrP. Recombinant receptor can be produced in vector/host cell systems and used in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, to screen for (ant)agonists and to raise antibodies. Host cells PTH serum levels.
                                                                          DNA encoding vertebrate parathyroid hormone receptor - useful for diagnosis and treatment of e.g. hypercalcaemia, hypo-calcaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Parathyroid hormone receptor; PTH receptor; antibody; therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the rat parathyroid hormone (PTH) receptor R15B, which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is a human G-protein coupled receptor (GPCR) used designated h15571. h15572 GPCR polynucleotides and polypeptides may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GPCR expression. Such diseases includes immune, haematological, fibrotic, hepatic and respiratory disorders including asthma, allergies (e.g. allergic rhinits and psoriasis), pathogenic infections, chronic inflammatory diseases, organ-specific autoimmunity, graff rejection, graff respection, graff versus host diseases, oystic fibrosis and, in particular, liver fibrosis. The GPCR polypeptides may be used as antigens in the production of antibodies against GPCR and in assays to identify
opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       parathyroid hormone/parathyroid hormone-related peptide receptor; h15571; immunomodulatory; vascular; hepatic; antiasthma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding a G-prot. coupled receptor polypeptides, useful for preventing, diagnosing and treating, e.g. liver fibrosis and asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            modulators (agonists and antagonists) of GPCR expression and activity. The anti-GPCR antibodies and GPCR antagonists may also be used to down regulate GPCR expression and activity. The anti-GPCR antibodies may be used as diagnostic agents for detecting the presence of GPCR polypeptides in samples.

The clone encodes a protein which may be used in a therapeutic composi, to inhibit activation of PTH or PTHPP and thus reduce the level of calcium in the blood. Cpds. capable of competing with PTH or PTHPP for binding can be identified using fragments of the clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a

                                                                                                                                                                                                                                                                                                                                                                                                                             parathyroid hormone/parathyroid hormone related protein tragment of parathyroid hormone related protein.

(PTH/PTHFP) receptor protein. The peptide is capable of binding PTH or PTHFP and acting as an antagonist of these cpds. The peptide may be used to inhibit activation of PTH or PTHFP and thus reduce the level of calcium in the blood. Cpds. capable of competing with PTH or PTHFP for binding can be identified using the protein prod. and DNAs homologous to PTH DNA can be identified using fragments of the clone as probes. The sequence may be used for the prodn. of antibodies useful for the treatment, classification, prognosis and/or treatment of disorders related to the interaction between a cell receptor and a ligand such as in hypercalcaemia. The peptides can be used to raise antibodies. The peptides and antibodies are useful in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, and can also be used to screen for (ant)agonists of therapeutic appln.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA encoding vertebrate parathyroid hormone receptor - useful for diagnosis and treatment of e.g. hypercalcaemia, hypo-calcaemia,
                                                        Parathyroid hormone; receptor; parathormone; PTH; parathyroid hormone-related protein; PTHrP; calcium; homeostasis; hypercalcaemia; hypocalcaemia; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hormone receptor; PTH receptor; antibody; therapy; hypercalcaemia; opossum; rat; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 19;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Indels

                                                                                                                                                                    This sequence is a fragment of a opossum parathyroid hormone (PTH) receptor which is targeted by the antibody of the invention. The antibody of the invention is immunoreactive with naturally occurring human, rat or opossum PTH receptor. The antibody is useful for treating disorders characterised by overstimulation of PTH receptors by their ligand and for the diagnosis of PTH-related hypercalcaemia.

The present sequence is a human G-protein coupled receptor (GPCR) used for comparison with the seven transmembrane domain of a novel GPCR designated h15571 GPCR polynucleotides and polypeptides may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GPCR expression. Such diseases includes immune, hemantological, fibroic, hepatic and respiratory discorders including asthma, allergies (e.g. allergic and psoriasis), pathogenic infections, chronic inflammatory diseases, organ-specific autoimmunity, graft rejection, graft versus host disease, cystic fibrosis and, in particular, liver fibrosis. The GPCR polypeptides may be used as antigens in the production of antibodies against GPCR and in assays to identify modulators (agonists and antagonists) of GPCR expression and activity. The anti-GPCR antibodies and GPCR antagonists may also be used to down regulate GPCR expression and activity. The anti-GPCR antibodies may be used as diagnostic agents for detecting the presence of GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Porcine vasoactive intestinal peptide receptor; pig; lung tissue; probe; amplification; primer; PCR; vasodilation; gastrointestinal tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The amino acid sequence of the novel porcine vasoactive intestinal peptide (pVIP) receptor. The gene was isolated from a cDNA library in the Superscript (RTM) Lambda System derived from porcine lung tissue RNA using a 700 bp probe amplified from lung tissue cDNA using primers AAQ89547-8. The gene was inserted into the plasmid pSPORT for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Porcine vasoactive intestinal peptide receptor and DNA - useful in receptor bio:activity assay and to screen for agents which inhibit or stimulate receptor activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

sequencing. Thereafter the gene was inserted into the plasmid pRC/CMV for transfection of 293 cells and production of the recombinant protein. The activity of pVIP is linked to vasodilation in the lungs and gastrointestinal tract. The receptor is useful in a bioactivity assay for quantifying the level of stimulation and repression of pVIP enzymatic activity in response to test compounds. The receptor is also useful in screening for pVIP receptor inhibitory or stimulatory agents.
                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                           Human glucose-dependent insulinotropic peptide receptor protein sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for maintaining or increasing bone density or formation comprising administering to an individual a glucose-dependent insulinotropic peptide (GIP) or a functionally equivalent analogue. Also described are: (1) a transgenic non-human mammal overexpressing GIP; and (2) a method for decreasing bone density comprising administering to an individual an inhibitor of GIP binding to the GIP receptor. The method is useful for maintaining or increasing bone density and promoting bone formation in patients at risk of osteoporosis. The present sequence represents the human GIP receptor protein sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel recombinant GIP (Glucose-dependent insulinotropic/insulin releasing polypeptide) receptor protein (I) or an active fragment of (I), which binds to the GIP peptide hormone without initiating a signal transduction cascade. The invention also describes a (1) a recombinant DNA molecule (II), encoding (I) or its active fragment, comprising: (a) a promoter that is in the beta cells of the pancreas; (b) a sequence that is capable of binding to the GIP peptide hormone without initiating a signal transduction cascade; (c) a termination sequence; and (d) a polyadenylated tail sequence, where the expression of (II) in a sultable host causes a diabetes type phenotype. (2) a vector (II), comprising (II); (3) a eukaryotic or prokaryotic cell line (IV), containing (II); and (5) preparing (V). (V) is used as a model system for the investigation of the development, treatment and consequences of the investigation of the development, treatment and consequences have been developed, but the use of (I) in a transgenic animal demonstrates of the role of a defective GIP receptor in the development of diabetes, which has not been shown before. This sequence represents the human GIP receptor protein varaint which has a deleted intracellular loop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .;

This invention describes a novel recombinant GIP (Glucose-dependent insulinotropic/insulin releasing polypeptide) receptor protein (I) or an active fragment of (I), which binds to the GIP peptide hormone without initiating a signal transduction cascade. The invention also describes a (I) a recombinant DNA molecule (II), encoding (I) or its active fragment, comprising: (a) a promoter that is in the beta cells of the pancreas; (b) a sequence that is capable of binding to the GIP peptide hormone without initiating a signal transduction cascade; (c) a termination equence; and (d) a polyadenylated tail sequence, where the expression of (III), comprising (II); (3) a eukaryotic or prokaryotic cell line (IV), containing (II); (4) a transgenic, non human animal (V), containing (II); (d) a eukaryotic or prokaryotic cell line (IV), containing (II) or (III); (4) a transgenic, non human animal (V), containing (II) and (5) preparing (V); (V) is used as a model system for the investigation of the development, treatment and consequences of diabetes mellitus. Several animal models for the study of diabetes have the role of a defective GIP receptor in the development of diabetes, which has not been shown before. This sequence represents the human GIP (V), receptor protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         h15571; immunomodulatory; vascular; hepatic; antiasthma; anitmicrobial; antifilammatory; immunosuppressive; gene therapy; vaccine; G-protein coupled receptor; GPCF, liver fibrosis; respiratory disorder; infection; chronic inflammatory disease; organ-specific autoimmunity; graft rejection; cystic fibrosis.
                                                                                                                                                                                                                                                                                                Recombinant GIP (Glucose dependent insulinotropic polypeptide) recepton protein used as a model for investigation of development and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                           The present sequence is a human G-protein coupled receptor (GPCR) used for comparison with the seven transmembrane domain of a novel GPCR designated h15571. h15571 GPCR polynucleotides and polypeptides may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GPCR expression. Such diseases includes immune, haematological, fibrotic, hepatic and respiratory diseases including asthma, allergies fraintis and psoriasis), pathogenic infections, chronic inflammatory diseases, organ-specific autoimmunity, graft rejection, graft versus host disease, cystic fibrosis and, in particular, liver fibrosis. The GPCR polypeptides may be used as antigens in the production of antibodies against GPCR and in assays to identify modulators (agonists and antagonists) of GPCR expression and activity. The anti-GPCR antibodies may be used to down regulate GPCR expression and activity. The anti-GPCR antibodies may be used as diagnostic agents for detecting the presence of GPCR.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is a parathyroid hormone receptor type 3 (PTH3R) receptor protein of the invention. The invention also relates to a PTH1R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel zebrafish parathyroid hormone/parathyroid hormone related peptide receptor 3 and isolated nucleic acid encoding zebrafish parathyroid hormone receptor 1 for treating disorders associated with receptor
                              VIP2 receptor was identified by PCR of rat pituitary cDNA using degenerate oligo primers corresp. to the third and seventh transmembrane domains of the secretin family of G-protein linked receptors (Q83212 and Q83213 respectively). The primers were based on the third and seventh transmembrane domains of the rat secretin, pig calcitonin and opossum parathyroid hormone (PTH) receptors (see R70137-R701410. Full length cDNAs were isolated from an olfactory bulb cDNA library. The sequence has been submitted to the EMBL/GenBank database under accession No. 225885 (see Q83211/R70136). A polynucleotide probe comprising a labelled DNA or RNA sequence capable of specifically binding to a gene for VIP2 receptor is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
VIP2 is an adenylate cyclase-linked VIP receptor from rat brain. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 11;

treceptor protein. Antagonists of PTHIR or PTHIR can be used for the treatment of diseases associated with an increase in PTHIR or PTHIR or activity, respectively. The peptides are used for diagnosis or prognosis of diseases and disorders associated with PTHIR or PTHIR, such as cancer. The polypeptides can be used as amolecular weight markers on sodium docerns in the polypeptides are useful columns. Antigenic epitope-bearing peptides and polypeptides are useful to raise antibodies, including monoclonal antibodies, that bind specifically to a polypeptide. The peptides are useful during diagnosis of diseases and disorders in mammals involving PTHIR or PTHIR receptor expression or function. Mutations that affect PTHIR or PTHIR sequence and/or expression levels of prints or PTHIR could be diagnostic for patients with disease or disorders of a developmental, physiological or neurological nature. The mapping of DNAs to chromosome for chromosome identification. The mapping of DNAs to chromosomes as an important first step in correlating those sequences with genes associated with disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Parathyroid hormone (PTH) receptor fragments, including those (AAR92229-84) based on the PTH extracellular region and those (AAR92286-87) based on the intracellular domain, are produced by incorporating encoding DNA sequences into a vector, and culturing cells transformed by the vector. The peptides can be used to raise antibodies. The peptides and antibodies are useful in the treatment, diagnosis or prognosis of e.g. hypercalcaemia and hypocalcaemia, and can also be used to screen for (ant)agonists of therapeutic appln.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA encoding vertebrate parathyroid hormone receptor - useful for diagnosis and treatment of e.g. hypercalcaemia, hypo-calcaemia,
be used to identify agonists and antagonists which can be used in similar manner. In addition, the gene can be used for chromosome
                                                                                                                                                                                                                                                                                                                                                                                      parathyroid hormone-related protein; PTHrP; calcium; homeostasis; hypercalcaemia; hypocalcaemia; cancer.

This is a human glucagon-like peptide-2 (GLP-2) receptor fragment. The specification provides the sequences of human and rat GLP-2 receptors. Genetically engineered host cells containing the GLP-2 receptor encoding nucleic acid sequences operably linked to expression elements can be used to produce the recombinant proteins. These cells can be used in a method for identifying GLP-2 receptor ligands which comparises incubating a candidate ligand with the cell, and determining whether binding has occurred between the GLP-2 receptor and the candidate ligand. The GLP-2 receptor and the candidate ligand. The GLP-2 receptor solvents of the GLP-2 receptor and second the candidate ligand as the GLP-2 receptor and second of solutions. They can also be used for constructing cell lines for GLP-2 receptor ligand screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rat; human; glucagon receptor; transgenic animal; metabolism; model; signal sequence; transmembrane domain; glycosylation site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 5 describes the isolation of human GR.
The GR coding sequence was constructed from partial clone
p9A11 (5' end) and clone 40.2-2 (3' end).
Host cells conty GR DNA may be used for the prodn. of
recombinant GR. GR DNA may also be expressed in non-human
transgenic animals, pref. mice.
Such animals may be readily
used as models to study the role of the glucagon receptor

The present sequence is a human G-protein coupled receptor (GPCR) used for comparison with the seven transmembrane domain of a novel GPCR cost designated h15571. h1571 GPCR polynucleotides and polypeptides may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GPCR expression. Such diseases includes immune, hemmatological, fibrotic, hepatic and respiratory discorders including asthma, allergies (e.g. allergic rhinitis and psoriasis), pathogenic infections, chronic inflammatory diseases, organ-specific autoimmunity, or graft rejection, graft versus host disease, cystic fibrosis and, in particular, liver fibrosis. The GPCR polypeptides may be used as antigens in the production of antibodies and ablants GPCR and in assays to identify modulators (agonists and antagonists) of GPCR expression and activity. The anti-GPCR antibodies and GPCR antagonists may be used as diagnostic agents for detecting the presence of GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This represents a rat glucagon-like peptide-2 (GLP-2) receptor.                                                                                                                                                                            New recombinant glucagon receptors and antibodies - useful to produce model transgenic animals for study and with therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                      Rat and human glucagon receptor (GR) DNA was isolated.
Host cells contg. GR DNA may be used for the prodn. of
recombinant GR. GR DNA may also be expressed in non-human
transgenic animals, pref. mice. Such animals may be readily
used as models to study the role of the glucagon receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 15; Length 477;

specification provides the sequences of human and rat GLP-2 receptors. Genetically engineered host cells containing the GLP-2 receptor encoding nucleic acid sequences operably linked to expression elements can be used to produce the recombinant proteins. These cells can be used in a method for identifying GLP-2 receptor ligands which comprises incubating a candidate ligand with the cell, and determining whether binding has occurred between the GLP-2 receptor and the candidate ligand. The GLP-2 receptor polynucleotides can be used to isolate GLP-2 receptor-encoding homologues. They can also be used for constructing cell lines for GLP-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This represents a human glucagon-like peptide-2 (GLP-2) receptor. The specification provides the sequences of human and rat GLP-2 receptors. Genetically engineered host cells containing the GLP-2 receptor encoding nucleic acid sequences operably linked to expression elements can be used to produce the recombinant proteins. These cells can be used in a method for identifying GLP-2 receptor ligands which comprises incubating a candidate ligand with the cell, and determining whether binding has

-I- FUNCTION: THIS IS A SPECIFIC RECEPTOR FOR PARATHYROID HORMONE. THE ACTIVITY OF THIS RECEPTOR IS MEDICATED BY G PROTEINS WHICH ACTIVATE ADENTLYIL CYCLASE. PTHR2 MAY BE RESPONSIBLE FOR PH EFFECTS IN A NUMBER OF PHYSIOLOGICAL SYSTEMS. IT MAY PLAY A SIGNIFICANT ROLE IN PANCREATIC FUNCTION. PTHR2 PRESENCE IN NEURONS INDICATES THAT IT MAY FUNCTION AS A NEUROTRANSMITTER RECEPTOR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCE FROM N.A.

"Molecular cloning and functional characterization of a human liver vascactive intestinal peptide receptor.";

cell. Signal. 6:321-333(1994).

-!- FUNCTION: THIS IS A RECEPTOR FOR VIP. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVITY OF THIS RECEPTOR. THE AFFINITY IS VIP = PACAP-27 > PACAP-38.

-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PRODUCED BY ALTERNATIVE

-!- ALTERNATIVE PRODUCTS: TWO FORMS ARE PRODUCED BY ALTERNATIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LIVER AND PLACENTA.

Proc. Natl. Acad. Sci. U.S.A. 96:1569-1574(1999).
T. FUNCTION: THIS IS A RECEPTOR FOR GLUCAGON-LIKE PEPTIDE 2. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS WHICH ACTIVITY BELONGSTON INTEGRAL MEMBRANE PROTEIN.

-1- SUBCELLULAR BLOCATION: INTEGRAL MEMBRANE PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Sequence 5, Application US/08142439A

Patent No. 5670360

GENERAL INFORMATION:
TITLE OF INVENTION: Receptor for the Glucagon-Like-Peptide-1

TITLE OF INVENTION: (GLP-1)

NUMBER OF SEQUENCES: 9

CORRESPONDENCE ADDRESS:
ADDRESSE: No. 56703600 No. 5670360th America, Inc.
STREET: Now York
CITY: Now York
STATE: Now York
COUNTRY: U.S.A.

ZIP: 10174-6201

COMPUTER READBLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25

Patent No. 6030804

GENERAL INFORMATION:
APPLICANT: SOPPEL, Daniel R
APPLICANT: Yi, Li
APPLICANT: Ruben, Steven
TITLE OF INVENTION: G-Protein Parathyroid Hormone receptor
TITLE OF INVENTION: HITDG74

NUMBER OF SEQUENCES: 28

CORRESPONDENCE ADDRESS:
ADDRESSEE: Carella, Byrne, Bain, Gilfillan, Cecchi,
ADDRESSEE: Stewart & Olstein
STREET: 6 Becker Farm Road

CITY: Roseland
                                                                                                                                                                                                                                                    Length 19;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 60;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels
